SUMMARY

I am a skilled Computer Science graduate with international experience having worked and studied in four countries. I have been writing software for over 11 years and am knowledgeable in Swift, Python, SQL, Java, JavaScript among others. I am highly proficient with Java as I have authored many open source projects with over 60 million cumulative downloads with consideration for UX to allow for seamless and accessible use.

I am also familiar with recent AI trends, including proficiency at interfacing and fine tuning large language models (LLMs) to automate complex tasks and provide real-world solutions. I have been the lead dev on numerous teams and have taken part in the collaborative process following Agile practices.

WORK EXPERIENCE

2022-Present
Data Miner
DB Manager

TRANSPHARMATION

Developed software that improved lead generation providing a **2x increase** in the number of **leads generated** each month. Created a tool which automatically deduped, and filtered records while generating a comprehensive report on any issues found **reducing wasted hours** on irrelevant contacts.

2020
Data Analyst

NYNJTC TRAIL CONFERENCE

Produced a **Python** application that sifted through **multiple excel sheets** with over 100,000 entries each to **produce a PDF** based on an input, which the NYNJTC team has been **using ever since saving hours of work daily**.

2018
Sound Tech

TEDxYOUTH@OFS

Worked in a new fast-paced and dynamic environment as **part of a wider team**, where I had to adapt quickly to changing situations and **problem-solve in real time**.

EDUCATION

BSc Computer Science - First Class Honours
University of British Columbia, Canada
Top 50 world university rankings 2025

PROJECTS

AI Driven Insurance Policy Checker

Led team of four in developing a web application to perform automatic **discrepancy analysis** on **hundreds** of policy documents using traditional and **AI methods** to produce **comprehensive reports** on key differences found **in seconds** over the **prior manual process**.

Blazor Group Chat App

Co-Led team of five to make a C# proof of concept web app that facilitated **group communication** using Blazor and .NET with **Azure based hosting** to explore the scalability of large network systems.

MixinSquared

Created an open source Java project **used by thousands of developers** to help them approach complex issues with compatibility in a stable way.

Phordy - BCHACKS 2023

Led a team to create a 4D platformer game in 48 hours using C# despite having little knowledge of the language ahead of time.

Minecraft Modding

I have written over 30 Minecraft mods that have over **60 million downloads** demonstrating my ability to produce **software that people want and keep using**.

Online Communities Manager

Created and actively maintain **multiple Discord communities** to ensure that I stay on top of any issues and pain points that arise, helping to **maintain a positive user experience**.

Java Copper API

Built a developer library that abstracts Copper's **RESTful API** away using developer libraries, allowing Java apps to **communicate with Copper seamlessly**.

SKILLS

Java

Object-Oriented Programming

Gradle / Maven

Web Development

Python, NumPy & Pandas

Git / GitHub Workflow

Docker / Container Software

REST

JVM Bytecode

My years of developing, in the workplace, in academia and in my own time have allowed me to pick up and become highly proficient in numerous areas. This has enabled me to excel in environments that use familiar or unfamiliar tech stacks as it does not take me long to transfer and translate the skills I have in one area to another.

AWARDS

BCHACKS Accessibility Award

Recipient of annual university award in recognition of innovative game development that included a colour correction setting for the visually impaired.

Deputy Vice-Chancellor Scholarship

Given to international students with high academic standing.

ABOUT ME

I have spent most of my life moving around, born in the United Kingdom, raised in Singapore and the United States before studying in Canada. Along the way I have visited many other countries and interacted with many peoples giving me a greater appreciation for different cultures and walks of life – especially the food.

When I moved to Singapore I picked up skateboarding as a hobby and would spend hours learning how to stay upright in the basement of the condominiums we lived in. Once at college I acquired an electric skateboard which I used for my daily commutes and have since racked up thousands of miles.

As well as skateboarding I do enjoy rugby. I joined the Dragons Rugby Club in Singapore and went on to help start my high school's own rugby team. I introduced my best friend to the sport who went on to become the captain after I left.

On the more creative side I enjoy art, mostly pixel art for assets, and am an enthusiastic self-taught amateur. In addition, a lot of my creative energy is directed toward uncovering and developing fixes for the games my friends and I enjoy, leaving my software open source so others can build on it. Occasionally I get commissioned for these fixes – which is always a bonus!
